

Mohammed Ahmed Al-Hazmi

Junior Software Engineer

alhazmimohammed663@gmail.com • +967771694200 • Yemen, Dhamar

[GitHub](#)

Profile

Junior Software Engineer with a solid foundation in Data Structures, Algorithms, and Clean Code. Proficient in C#, C++, and SQL Server, with hands-on experience building desktop systems using 3-Tier Architecture. Passionate about engineering efficient, maintainable software and solving complex logic challenges.

Education

Bachelor of Science in Information Technology at Al-Saeeda University, Yemen, Dhamar **July 2021 - May 2025**

Grade: Excellent (+90%)

Focused on Core Computer Science concepts, advanced Data Structures, Object-Oriented Programming (OOP), and Software Architecture.

Skills

C#

C++

MS SQL Server/ T-SQL

Algorithms & Data Structures

Object-Oriented Programming (OOP)

3-Tier Architecture

Problem Solving

Windows Forms (.NET)

Git & GitHub

RESTful API

Entity Framework Core & ADO.NET

HTML & CSS

Learning JavaScript

Projects

(Driver and Vehicle Licensing Department - DVLD) • [GitHub](#)

Point 1: Analyzed complex business workflows for licensing processes and designed a robust relational database with advanced stored procedures.

Point 2: Developed the application using C# .NET Windows Forms following a strict 3-Tier Architecture to ensure separation of concerns.

Point 3: Implemented modern UI elements using Guna UI and integrated secure user authentication and tracking mechanisms.

(Books Management System - BMS) • [GitHub](#)

Point 1: Conducted system analysis to design database schemas optimized for tracking book inventory, authors, and borrowing workflows.

Point 2: Built a clean, maintainable architecture using ADO.NET and C# for reliable data access and business logic processing.

Point 3: Designed intuitive user interfaces for efficient search, filtering, and real-time validation of borrowing records.

(Car Rental Management System) • [GitHub](#)

Point 1: Structured database tables and relationships to handle vehicle availability, customer data, and rental transactions seamlessly.

Point 2: Implemented a multi-tier application logic with comprehensive error handling and centralized activity logging for system security.

Point 3: Developed a smooth desktop interface for managing rental agreements, calculations, and real-time status updates.

(Clinic Appointments Management System) • [GitHub](#)

Point 1: Designed an optimized database schema to manage patient files, doctor schedules, and appointment slots without conflicts.

Point 2: Created the core scheduling engine using C# and T-SQL triggers to ensure data integrity and automated appointment updates.

Point 3: Built dashboard views for receptionists to easily book, reschedule, and display clear overviews of patient appointments and visits.

Languages

Arabic - Native

English - Basic

Certificates

Software Engineering & Full-Stack Desktop Developer from Programming Advices
